# VIBING WEBFORM

Building webforms while vibing with AI

@jrockowitz

PDF - [bit.ly/vibing-webform-pdf](https://bit.ly/vibing-webform-pdf)

# HI, I'M JACOB ROCKOWITZ

- My name is Jacob Rockowitz.
- I am known as jrockowitz on the web.
- I am a Drupal developer and software architect.
- I built and maintain the Webform module for Drupal 8+.

[jrockowitz.com](http://jrockowitz.com)

# ME & AI

- I have been experimenting with AI in my [Drupal playground](#).
- My goal is to recognize what AI can and can't do.
- While accepting how AI is changing our industry.
- Simply put, AI can't be ignored, but it is still just a (powerful) tool.

[Read my blog](#)

This is my first Webform module  
presentation in five years.

Have patience and ask questions.

# AGENDA

- **Part 1: Webforms**  
Understanding and building webforms
- **Part 2: AI & Webforms**  
Understanding how AI builds webforms

# UNDERSTANDING THE WEBFORM MODULE

The Webform module allows you to build any type of form to collect any type of data, which can be submitted to any application or system.

[Learn more about Webform](#)

# WHY WEBFORM (AND DRUPAL)

It provides all the features expected from a proprietary enterprise form builder combined with the flexibility and openness of Drupal.

# THE USE CASE...

- **Build** a form or copy a template.
- **Publish** the form as a page, node, or block.
- **Collect** form submissions.
- **Send** confirmations and notifications.
- **Distribute** submissions to external systems.
- **Review** results online.
- **Download** results as a CSV.

# BUILDING A WEBFORM

1. Create a feedback form.
2. Test the form.
3. View the submissions.
4. Send a confirmation email.
5. Remote post the data.
6. Place the form as a block.
7. Create a Webform node.

Let's do a demo

# EXAMPLES, TEMPLATES, & DEMOS

The Webform module provides examples, templates, & demos that can be used as a starting point for building forms & applications.

# EXAMPLES INCLUDED IN THE WEBFORM MODULE

- **Style Guide** - Examples of all elements and layouts
- **Custom Options** - Custom options element
- **Input Masks** - Elements with input masks
- **Conditional Logic** - Elements using conditional logic
- **Computed** - A computed element
- **Wizard** - A multi-step form
- **Cards** - A multi-step 'cards' form

Learn by examples

# TEMPLATES

- Templates are reusable forms.
- Changing or deleting a template does not change any existing forms.
- A form created from a template is a copy (a.k.a duplicate).

Using templates

# DEMOS

- **Application Evaluation**

An evaluation form attached to applications

- **Event Registration**

A registration form that tracks which event a user has registered for

# FEATURES

- Drag-n-drop form builder
- Multi-column layout
- Modal dialogs
- Conditional logic
- Open/close scheduling
- Prepopulate
- Email handling
- Remote post
- Submission limits
- Submission preview
- Autofill
- Save draft
- Auto purge
- Access controls
- Confirmation message
- Confirmation redirects
- Sharing

**THE WEBFORM MODULE SHIPS WITH  
REASONABLE DEFAULT SETTINGS, BUT  
EVERYTHING IS CUSTOMIZABLE.**

(AI understands everything is customizable)

# FORM ELEMENTS

- Standard HTML inputs
- Advanced HTML inputs
- File uploads
- Signatures
- Buttons
- Rating
- Image selection
- Addresses
- Entity references
- Select menu enhancement
- Computed values
- Tooltips
- Slideouts
- Input masks
- Word/character counter
- Regex validation
- Access controls
- Unique values

# FORM ELEMENT FEATURES

- **Definition** - Name, cardinality, & default value
- **Labels** - Title, description, “help” text & more
- **Display** - Prefix, suffix, size, input masks, etc
- **Validation** - Required, unique, pattern, counter, etc
- **Conditions** - Hide/show, required & disabled
- **Access** - Roles, user, or permission
- **Advanced** - Custom attributes & settings

Dissecting a form element

# WEBFORM HANDLERS

A Webform Handler is a plugin that processes a webform submission — essentially, it defines what happens after someone submits a form.

# WEBFORM HANDLER USE CASES

- Email notification and confirmation.
- Push data to CRM.
- Subscribe to mailing lists.
- Flag a submission based on submitted values.
- Conditionally change confirmation message.

# TYPES OF WEBFORM HANDLERS

- **Email & Scheduled Email**  
Sends a webform submission via an email
- **Action & Settings**  
Trigger a conditional action or setting on a submission
- **Remote Post**  
Posts webform submissions to a URL
- **Debug**  
Debug webform submission

# FORM SETTINGS

- General
- Form
- Submissions
- Confirmation
- Email/Handlers
- CSS/JS
- Access

Walk-thru settings

# GENERAL SETTINGS

- Disable saving of results.
- Use the webform as a template.
- Customize URL aliases.
- Ajaxify the form.
- Third party settings (for example, Honeypot & Antibot)

# FORM SETTINGS & BEHAVIORS

- Set open and close dates.
- Customize messages and labels.
- Pre-populate using query string parameters.
- Tweak multi-step wizard progress bar.
- Enable submission previews.

# SUBMISSIONS SETTINGS & BEHAVIORS

- Submission labels and messages
- Submission limits
- Save drafts
- Submission purging
- Autofill

# CONFIRMATION SETTINGS & BEHAVIORS

- Dedicated confirmation page
- Inline message
- Status message
- Modal confirmation dialog
- Redirect to external or internal URLs.

# CUSTOM CSS & JAVASCRIPT

Site builders and front end developers can inject custom CSS & JavaScript to tweak a webform's look-n-feel and client-side behaviors.

- Tweaks font types and sizes
- Adjusts margins, padding, and layout
- Client-side validation and/or hide/show logic

# ACCESS CONTROLS

Set access rules by role, user, and/or permission.

- Create
- View
- Update
- Delete
- Purge
- Administer

# GLOBAL CONFIGURATION

Configuration defines the default features, functionality, & behaviors available to all webforms.

# THINGS THAT SHOULD BE CONFIGURED

- Private file access for file uploads.
- SPAM protection.
- Available elements.
- API keys.
- Reusable options.

# CONFIGURATION

- Forms
- Elements
- Options
- Submissions
- Handlers
- Exporters
- Libraries
- Advanced

[Explore configuration](#)

# ADD-ONS & EXTENSIONS (A.K.A. MODULES)

- Contributed modules extend Webform in every direction. (Entity generation, Views, and SPAM)
- Integrations connect Webform to services and platforms. (Salesforce, HubSpot, Mailchimp, Stripe, and Slack)

Finding add-ons

# TYPES OF ADD-ONS

- SPAM Protection
- Validation
- Elements
- Integration
- Submissions
- Mail
- REST
- Configuration
- Migrate
- Multilingual
- Workflow
- Development

# Q&A

Do you have any questions about Webforms before we start chatting with and about AI?

# **PART 2: AI & WEBFORMS**

Understanding how AI builds webforms

**AI UNDERSTANDS THE WEBFORM MODULE  
BECAUSE OF THE AMOUNT OF  
DOCUMENTATION AND EXAMPLES.**

(Coding agents can figure out a module by reading the  
code.)

# WAYS TO APPROACH USING AI

- Chat (ChatGPT)
- Harness (Claude Code)
- Agents (OpenClaw)

# WEBFORM SPECIFIC PROMPTS AND QUESTIONS?

- What is the Webform module?
- How do I use Webform module?
- When should I use Webform?
- Why should I use Webform?
- Where can I use a Webform?

# LET'S SEE WHAT AI CAN DO VIA CHAT

Provide a prompt to create a 'Request a medical appointment' form using the Webform module for Drupal and place it in a Drupal Recipe.

---

What is the best way to prevent SPAM via a Drupal Webform?

# LET'S SEE WHAT AI CAN DO VIA A HARNESS

Export my feedback form into a Drupal recipe called 'recipes/my\_feedback'?

---

Add SPAM protection, using Honeypot, to the feedback webform in the 'recipes/my\_feedback' recipe.

---

Create a 'Request a medical appointment' webform and place it in a 'recipes/webform\_appointment' recipe.

# AI TIPS & TRICKS

Always have a plan and use skills like [Superpowers](#) to brainstorm.

---

Als can make mistakes, especially when they have to guess at the answers without context.

---

Use AI as a tool to learn Drupal,  
and not as a way to not learn Drupal.

# APPROACHING AI

- Be **curious**
- Open to a **challenge**
- Share your **experience**

# Q&A

Questions about Webform, AI, or Drupal

---

# THANKS!!!
